Topics of the guideline	Awareness-building for the special needs of cognitive impaired people and how to provide them with an accessible public transport		
Description of the guideline	<p>While much is being done to improve vehicles and infrastructure to meet the needs of people with physical or sensory impairments, the issues of cognitive impairment and mental health are largely neglected. There is a significant untapped transport market for people who currently lack the confidence or understanding to make journeys.</p> <p>This guideline provides solutions to improve access for cognitive impaired. The practical steps that can improve people's ability to use public transport include training of transport staff, familiarisation with the transport system, the use of both visual and audible information and simple and clear signage and the presence of staff.</p> <p>This report is intended to help those who plan, design and run transport systems and transport infrastructure to understand the issues that affect cognitive impaired and improve their services and facilities for the travelling public as a whole.</p>
